# Project-Based **INTERNSHIP** BIOINFORMATICS

- ✓ 2, 3 & 4 Month Tracks
- ✓ End-of-Semester Project Support
- ✓ Dissertation & Research Guidance
- ✓ Hands-on Experience

- ✓ Build a Complete Research Project
- ✓ Gain Practical Skills in Genomics Data Analysis & Interpretation
- ✓ Strengthen Your Academic Profile

**Complete Your Research Project with Expert Guidance**

**Get a Certificate of Completion**

# Project-Based INTERNSHIP BIOINFORMATICS

Designed for students seeking end-semester project support, dissertation assistance, or independent research exposure, the program provides step-by-step expert guidance at every stage — from topic selection and literature review to data analysis, visualization, and final report preparation.

Participants will walk away with a complete, well-structured research project aligned with their academic requirements and a strong practical foundation in one of the most rapidly advancing fields in life sciences.

## About the Internship

Get hands-on exposure to cutting-edge research focused on understanding genetic alterations in cancer. Work alongside experienced researchers and learn how genomics is revolutionizing cancer diagnostics and treatment.

## Topics

- Human Genomics:
  - Genomic Profiling of Cancer Mutations
  - Variant Discovery in Rare Genetic Disorders
  - Whole Exome Analysis for Disease Gene Identification
  - Cancer Transcriptomics and Differential Expression

**Starts: 4<sup>th</sup> May, 2026**

Flexible as per requirement

## Sessions

Live online sessions conducted three times per week on alternate days till the internship duration.

## Application Deadline

First cum First Serve

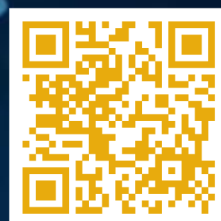

## Eligibility

- Life sciences/biotech/ bioinformatics students (UG/PG)
- Basic understanding of genetics/genomics preferred
- Eager to learn and contribute to real research

## Registration Process

Interested candidates can apply by filling out the Internship form.

Shortlisted candidates will be contacted to proceed further.
